

Introducing CertManager

CertManager is a secure, AI-powered platform that centralizes compliance data so it can be reliably maintained while safeguarding institutional knowledge.

CertManager leverages artificial intelligence and machine learning, providing organizations with the ability to establish a sustainable compliance system of record, manage change, and ensure continuous audit readiness.

Centralized Certification Storage

Definitive, centralized repository with advanced search filtering, tagging, certification history, and standardization of naming and categorization.

Technical File Management

Store product information and technical documents to each certification, connecting TCFs to DOCs, certifications, licenses, grants and more.

AI-Powered Change Management & Reporting

Understand compliance impact of standards, regulations and product changes and build reports to support audit readiness and collaboration.

Expiration Renewal Tracking and Alerts

Eliminate the risk of expired certificates with automated tracking and proactive notifications that give your team time to manage renewals.

Document Sharing

Securely share documents, reports, and certificates with internal teams and external partners through an auditable portal with granular permissions.

Product Mapping

Simplify the organization of complex product families, models, and SKUs with fully customizable structures that mirror your portfolio's unique hierarchy.

Security

Enterprise-grade security with SOC 2 Type II compliance, SSO, role-based permissions, and end-to-end encryption.

Solving Your Team's Top Pain Points

- ✓ Decentralized tracking of DoCs & Certifications
- ✓ Disorganized & dated technical files
- ✓ Unclear impact of regulatory changes
- ✓ Exposure to compliance risk
- ✓ Loss of institutional knowledge
- ✓ Lack of audit readiness
